Each page explains the action and the result to look for.

IN THIS MANUAL

02 Categories: create, rename and delete

03-05 Main Dishes: add an item and check the table

06-07 Main Dishes: edit an existing item

08-09 Main Dishes: delete with confirmation

10 Header navigation: show or hide menu links

11-13 Chatbot knowledge: add and maintain answers

Before you begin

Sign in with an authorized staff account. Main Dishes is the example for other menu catalog and featured-menu pages; fields may vary.

Screenshot scope: Categories, Main Dishes, Header Navigation and Chatbot Knowledge. Table images are reference views, not proof that a sample change was saved.

CATEGORIES

Organize reusable category labels

Open Categories from the sidebar before assigning a category to a menu item.

1 Add a category

Click **Add category**. Enter the category name in the dialog, then click **Add category** to save.

2 Rename a category

Click the pencil beside the correct row. Update its name and click **Save changes**.

3 Delete a category

Click the trash icon. Check the category name in the confirmation dialog before choosing **Delete**. Use Cancel to keep it.

The supplied screenshot shows the category table; its dialogs are described here.

Check the result: A saved label appears in Category Options. Confirm the spelling and use it in the item form.

Open the Create Item dialog

Start from Menu catalog > Main dishes.

1 Choose Main dishes

Click **Main dishes** in the sidebar. The Main Dish page lists the current menu items.

2 Click Add Item

Click the red **Add Item** button at the upper right. This opens the **Create Item** modal shown on the next page.

Check the result: The Create Item dialog opens over the table. No item is saved until you submit the form.

Fill in the item, then create it

Use one real menu item as your example; enter the restaurant-approved details.

Create Item

×

1

Add menu details, pricing, image text, and display order.

3

+ Create Item

1 Enter the menu details

Fill in **Name**, **Price**, Category, Sort and Description. Keep **Active** on if the item should appear to customers.

2 Add the image details

Enter descriptive Image Alt Text, then choose the food photo. Example price format: **P59**, as shown in the edit example.

3 Click Create Item

Review the fields, then click **Create Item** once. Wait for the save to finish. If an error appears, correct it before retrying.

Check the result: After a successful save, the modal closes and the item is added to the menu table.

Staff guide | 09 October 2026

04

Confirm the saved item in the table

This reference table shows where to verify your newly created item.

Search name or category...

StatusAll items

Image	2Name	Price	Category	Sort	3Status	Actions
	Goto Plain Warm Filipino rice porridge served simply for a comforting meal.	P59	Goto	0	Active	
	Goto with Egg Filipino rice porridge topped with a boiled egg.	P69	Goto	1	Active	
	Goto with Egg + Tokwa Warm rice porridge served with egg and fried tofu.	P79	Goto	2	Active	
	Goto Special A fuller serving of goto with savory meat and toppings.	P129	Goto	3	Active	
	Goto Lechon Kawaii Filipino rice porridge served with crispy pork belly.	P139	Goto	4	Active	

1 Search for the name

Enter the name you just saved in **Search name or category**. Keep Status set to **All items** while checking.

2 Compare the row

Confirm the name, description, price and category match your form. The item may be on another page because of its Sort value.

3 Check visibility

Confirm the status is **Active** if the item should be public. Use **View website** to check the customer menu.

Check the result: Your saved item appears with the intended details. The pictured Goto Plain row is an existing example, not a newly added record.

Choose the item to edit

Search for the item first, then use the pencil in that same row.

1 Find the correct row

Search by name or category. Double-check the item name before editing; this example uses **Goto Plain**.

2 Click the pencil

Click the pencil under **Actions**. The **Edit Item** modal opens with the existing details already filled in.

Check the result: The Edit Item dialog displays the selected item, as shown on the next page.

Update the details and save

The screenshot uses Goto Plain as the edit example.

Edit Item

Save Item

1 Change the needed fields

Edit the name, price, category, sort order, description or image details. Turn **Active** off to hide an item without deleting it.

2 Click Save Item

Click **Save Item** and wait for completion. Use Cancel or the close button if you do not want to save your changes.

Check the result: The modal closes after saving. Search the table again and confirm the changed values.

Staff guide | 09 October 2026

07

Select the correct item for deletion

Use the trash icon only for an item that should be removed.

1 Check the item name

Locate the row you want to remove. The pictured example is **Goto Plain**.

2 Click the trash icon

Click the red trash icon in that row. A confirmation modal opens before anything is deleted.

Check the result: The confirmation modal names the selected item. Check that name before proceeding.

Confirm or cancel the deletion

Deletion cannot be undone through this dialog.

1 Read the item name

Make sure the dialog names the item you intend to delete.

2 Cancel if unsure

Choose **Cancel** to close the dialog and keep the item.

3 Confirm Delete

Choose **Delete** only when the item should be permanently removed from the menu.

Check the result: After successful deletion, the row disappears. Search for its name to confirm it is no longer listed.

HEADER NAVIGATION

Choose which menu links customers see

Open Website settings > Header navigation.

- 1 Open Header navigation**
Select **Header navigation** in the sidebar.
- 2 Change the switch**
Click the switch beside the menu link. Red/on means visible; gray/off means hidden. Changes save immediately.
- 3 Read the row status**
Confirm the text says **Visible in the public header** or **Hidden from the public header**, as intended.

Check the result: Open View website and check the header. Hiding a link does not delete the menu items.

Open the approved-answer form

Open Website settings > Chatbot knowledge.

1 Open Chatbot knowledge

Select **Chatbot knowledge**. The Approved answers table lists the knowledge available to manage.

2 Click Add Q and A

Click **Add Q and A**. This opens a dialog for the question and its approved answer.

Check the result: The Add Q and A modal opens. Prepare accurate restaurant information before saving.

Write an approved answer

Use clear wording that staff have checked for accuracy.

Add Q and A

Close

The public bot can only return answers approved here.

1

Question

How do I reserve a table?

3

Cancel

+ Create answer

1 Enter the content

Fill in Question and Approved answer. Add a Category and Retrieval keywords that customers might use.

2 Set the options

Enable **Active for chatbot answers** to make it available. Enable **Show as a suggested question** only when it should be offered as a prompt.

3 Click Create answer

Click **Create answer** and wait for the dialog to close. Search the table for the question to verify it was saved.

Check the result: The new question and answer appear in Approved answers. Test the question in the public chatbot.

Staff guide | 09 October 2026

12

Keep existing answers accurate

Use the actions beside the answer you want to maintain.

1 Hide or activate

Use the eye icon to change whether an answer is active. Check the Status column after the update.

2 Edit an answer

Click the pencil, update the dialog fields, then click **Save changes**. Confirm the revised content in the table.

3 Delete an answer

Click the trash icon. Check the confirmation dialog, then Delete or Cancel as appropriate.

Sync Menu Data refreshes menu-based knowledge. Review the refreshed entries after menu changes.

Check the result: Search the question again and check its content and status. Test public answers after updating them.
