

Start in your workspace

A practical guide for staff managing menu content and customer experience.

1 Sign in and choose a section

Open the website login page and enter your authorized email and password. Successful login opens Overview at /management. Categories sits directly below Overview.

2 Use the navigation controls

Use the sidebar toggle to collapse the menu. On a phone, open navigation with the same toggle. View website opens the public site; your account menu contains Sign out.

IN THIS GUIDE

02 Categories · 03-04 Main Dishes · 05-06 Loyalty
07 Reviews · 08 Header navigation · 09-10 Chatbot knowledge

How to use the examples

Illustrations use sample values and simplified layouts. Follow the button labels in your actual admin screen; no sample records were added to your system.

02 / CATEGORIES

Organize your Categories

Create reusable labels first, then select them when adding or editing menu items.

Categories

ILLUSTRATIVE EXAMPLE

1

Add category

Category Options

Name	Actions
Chicken	2 Edit Delete

Add / edit dialog

Category Name: Chicken

Cancel | Add category / Save changes

- Create a label**

Click Add category. Enter a Category Name, such as Chicken, then click Add category in the dialog. Wait for the success message.
- Edit a label**

Click the pencil icon in the category row. Change Category Name and click Save changes. The label is available in menu item forms.
- Delete a label**

Click the trash icon. Check the category name in the alert dialog. Choose Delete to remove it, or Cancel to keep it.

Existing menu items need a separate check

Renaming or deleting a category does not automatically relabel existing items. Open affected items, select the correct category, and save them.

Add a Main Dish

Use one example to learn the shared menu-item workflow.

Main dishes > Add Item > Create Item
ILLUSTRATIVE EXAMPLE

Name *
Price *

Category

☒ On

Description *

Image Alt Text
Image

Cancel

3

Create Item

1 Open the form

Choose Main dishes in Menu catalog, then click Add Item. On a narrow screen, use the three-dot page actions menu.

2 Enter the dish details

Fill Name, Price, and Description. Select a Category (optional). Set Sort: lower numbers come first. Keep Active on to show the item; switch it off to hide it.

3 Choose an image and create

Upload one image, 5 MB or smaller, and write descriptive Image Alt Text. Click Create Item. Confirm the success message and find the new row.

Sample values only

Use the actual dish name and approved selling price. Image upload is optional; without one, a new item uses the section image. A dedicated dish photo is recommended.

Edit, hide, or delete dishes

The same controls are used across menu catalog and featured-menu sections.

Main dishes - find the correct item first

ILLUSTRATIVE EXAMPLE

Search menu items

Chicken Adobo

Status

All items

Name	Status	Actions
Chicken Adobo	Active	1 Edit 2 Delete

Alert: Delete Chicken Adobo?

Cancel

Delete

- 1

Edit or temporarily hide an item

Search for the dish, then click its pencil icon. Update the fields and choose Save Item. To hide a dish without deleting it, turn Active off and save.
- 2

Delete only when the item is no longer needed

Click the trash icon and check the item name in the confirmation alert. Click Delete to permanently remove it, or Cancel. There is no undo control.
- 3

Edit the section banner with Page Content

Open Page Content to change the heading, description, button label/link, badge, or hero image. Choose Save Page. This edits the section presentation, not an item.

Reuse this workflow

Apply these steps to Student meals, Bilao trays, Add-ons, Drinks, Meal of the day, Best sellers, and Promotions. Choose the correct section before editing.

Find and scan a loyalty card

Only logged-in administrators can access scanning and manage stamps or rewards.

Loyalty program > Scan Loyalty QR

ILLUSTRATIVE EXAMPLE

1 Open camera

Allow camera access when the browser asks.

Member code or QR link

BD-123ABC

2 Open loyalty card

- 1 Scan with the camera**

Open Loyalty program, click Open camera, and allow camera access. Point the camera at a customer's loyalty QR card. A recognized card opens its stamp screen automatically.
- 2 Use manual entry when needed**

If scanning is unavailable, type the member code or paste the loyalty QR link into Member code or QR link. Click Open loyalty card.
- 3 Or find a registered member**

In Loyalty Registrations, search by name, member code, or phone. Click Open card and confirm the member's identity before adding a stamp.

Troubleshooting

If camera access fails, check browser permission or use manual entry. If your session expires, sign in again. No separate admin PIN is required.

Add stamps and redeem rewards

A completed 10-stamp card resets automatically; earned rewards remain available.

Loyalty card - sample member

10

Add stamp

1

Redeem reward

2

Dialog: optional Receipt or note, then confirm the action.

- Add the next stamp**

Check the customer name and card progress. Click Add stamp (or the next available slot). Enter an optional receipt/note and click Add stamp in the dialog. Wait for success before repeating.
- Understand the automatic reset**

After stamp 10, the current card advances to a new cycle with 0/10 stamps. The completed card earns a pending reward. Staff may continue stamping while that reward waits to be redeemed.
- Redeem an earned reward**

When a reward is ready, click Redeem reward, add an optional note, and confirm in the dialog. The oldest pending reward is redeemed first. Check the success message and updated reward count.

If the card has changed

If you see a changed-card or already-added message, refresh the card before retrying. Never add another stamp just because a response is slow. No PIN is needed.

Moderate customer reviews

Choose which submissions appear on the public website.

Customer reviews > Review submissionILLUSTRATIVE EXAMPLE

all

draft

approved

rejected

Sample Customer
"The meal was freshly prepared and delicious."

Publication status

Approved - visible on website

2 Save changes

1 Find and inspect a submission

Open Reviews. The draft filter shows reviews awaiting moderation. Use all, approved, or rejected to find other submissions. Read the rating, comment, and any attached images.

2 Set the publication status

Click Review. Choose Approved to publish, Draft to keep it pending and hidden, or Rejected to keep it hidden. Click Save changes. This dialog changes status, not the customer's words.

3 Remove a review if necessary

Click Delete on the review. Read the confirmation alert and choose Delete or Cancel. Deletion permanently removes the review.

A review may disappear from the current filter

Approving a draft moves it out of the draft list. Select approved or all to find it again, then check the public website if needed.

Choose visible header links

Control the menu links shown to guests in the website header.

Header navigation > Customer-facing links

ILLUSTRATIVE EXAMPLE

Student Meals Visible in the public header	
Promotions Hidden from the public header	 2
Meal of the Day Visible in the public header	
Drinks Visible in the public header	

- Open the settings page**
 Under Website settings, choose Header navigation. Locate the section whose header link you want to show or hide.
- Change the switch**
 Turn the switch on to show the link, or off to hide it. The change saves immediately; there is no separate Save button. Wait for the operation to finish.
- Check the guest-facing result**
 Use View website and inspect the header. Refresh the public page if needed. Use Refresh in management to reload the saved switch states.

Hiding a link does not delete a section

These switches control header links only. They do not delete menu items, change their Active status, or block access through a direct page URL.

Create approved chatbot answers

Write the exact restaurant information the chatbot is allowed to share.

Chatbot knowledge > Add Q and A

ILLUSTRATIVE EXAMPLE

Question

How can I contact you about a concern?

Approved answer

For concerns, email barquillarenalyn@gmail.com or call 09929450802.

Category

Concerns

Retrieval keywords

concern feedback contact help

☒ Active for chatbot answers

☐ Suggested question

3

Create answer

- 1 Open Add Q and A**

Choose Chatbot knowledge under Website settings and click Add Q and A. Search first to avoid creating a duplicate question.
- 2 Write and classify the answer**

Enter Question, Approved answer, Category, and useful Retrieval keywords. Use clear, verified facts. The chatbot Category is a topic label, separate from menu Categories.
- 3 Set availability and save**

Enable Active for chatbot answers to make the entry usable. Optionally enable Show as a suggested question. Click Create answer and confirm the success message.

Reuse existing information where possible

The concern contact above is a sample based on the configured contact details. If that question already exists, edit it instead of creating a second copy.

10 / CHATBOT KNOWLEDGE - MAINTAIN

Keep chatbot knowledge current

Review saved answers when menus, contact details, or restaurant policies change.

Approved answers - row actions

ILLUSTRATIVE EXAMPLE

How can I contact you about a concern?

Active

Hide / Show

Edit

Delete

Sync Menu Data

Refreshes generated menu answers

- Edit or temporarily hide an answer**

Use Search knowledge to find an entry. Click the pencil icon, update the fields, and choose Save changes. The eye icon toggles Show answer / Hide answer without deleting the entry.
- Delete an obsolete answer**

Click the trash icon and confirm Delete in the alert dialog. Hidden entries remain saved; deleted entries are permanently removed.
- Refresh menu-based knowledge**

Menu edits automatically attempt to refresh generated menu answers. Use Sync Menu Data if they appear outdated, then check the success message. Generated menu answers may be replaced by synchronization.

BEFORE YOU SIGN OUT

Confirm saves succeeded. Check the public menu or chatbot where relevant. Close any open dialogs, stop an active camera, then open your account menu and choose Sign out.
